### HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1-61 are allowable as written over the prior art and do not suffer from any deficiencies under 35 U.S.C. § 101 or § 112. The following is an examiner's statement of reasons for allowance: regarding independent claims 1 and 31, the most pertinent prior art of record appears to be Inagaki et al., US 6,248,686 (2001) ("Inagaki") and Pinnavaia et al., US 6,641,657 (2003) ("Pinnavaia"). Inagaki discloses the binding of porous or mesoporous metal oxide framework materials with various organic groups via at least two metal-to-organic covalent bonds. *See* Inagaki at, *e.g.*, col. 2, ln. 6-18, col. 5, ln. 24-60, and col. 6, ln. 10-16. The organo-metal oxide is formed by polycondensation of the reactants, preferably in the presence of a surfactant template. *See id.* at col. 2, ln. 46-58. The framework materials comprise pores, pore walls, and tunable porosity, *see id.* at col. 5, ln. 24-44, and are made up of a main chain comprising two or more metallic atoms, at least one oxygen atom, and at least one organic linking group bound to at least two of the metal atoms. *See id.* at col. 5, ln. 24-28; Fig. 1. Stated alternatively, the main chain forms the framework's pore walls. *See id.*

However, as helpfully and persuasively illustrated by applicant, Inagaki differs from the above claims in that said claims' organometallic compound is anchored only *to/upon* the framework material's pore wall surfaces, whereas Inagaki's organometallic compound is at least partially *incorporated into/within* its framework material's pore wall internal skeleton during Inagaki's polycondensation reaction. *See, e.g.*, Inagaki at abstract; p. 16-18 of applicant's 6-3-09 arguments. Independent claims 1 and 31 have been allowed for at least the above differences from Inagaki.

Art Unit: 1793

For its part, Pinnavaia teaches a mesoporous to small macroporous cellular silica foam composition, *the surfaces of which* can be chemically functionalized with various organometallic and/or organic groups, wherein the functional groups may be applied after synthesis of the porous silica composition of specified porosity is prepared. *See* Pinnavaia at col. 2, ln. 12-49, col. 5, ln. 52-60 and col. 6, ln. 8-19.

However, independent claims 1 and 31 have been allowed over Pinnavaia at least because the prior art fails to teach or suggest that its organic and/or organometallic functional groups are attached to its porous silica composition's surface by at least two chemical linkages.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
